

ImageCOM

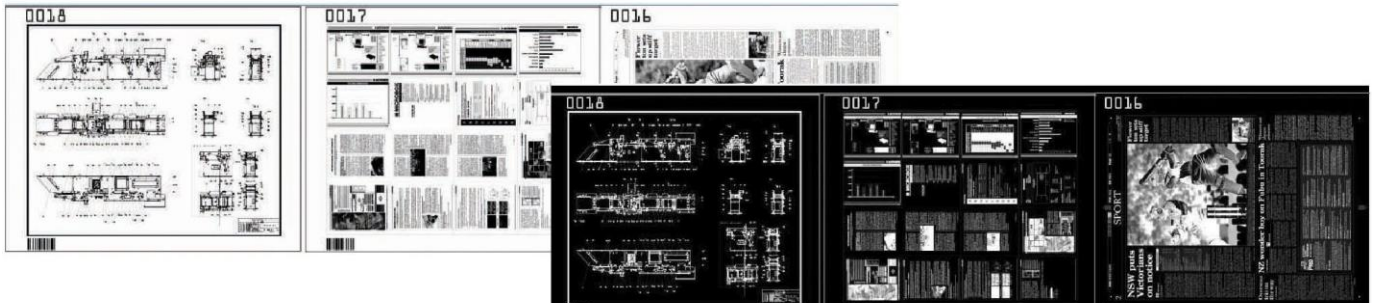

MICROBOX

COM Recorder

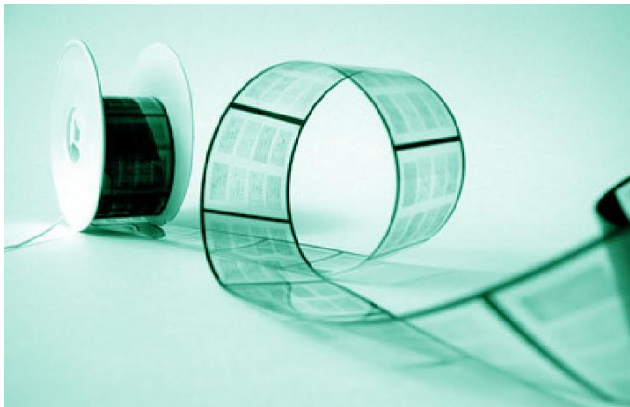

The MICROBOX ImageCOM is designed for the long-term storage of digital data on roll film. Once archived, documents can be read in today and in the future simply by magnifying or scanning. The storage is disaster tolerant and meets highest legal requirements. Once they are archived, an afterward change of the documents is not possible.

The MICROBOX writer response over especially high optical resolution of 300.000.000 pixels that will allow microfilming of full A0 document at 400dpi counting full original format with a precision of 2,1 micrometer where the image can be bitonal or grayscale.

With high optical resolution we get a possibility to set flexible organisation on the 35mm microfilm where smaller formats can be filmed in so called comic mode – more images in one 35mm frame area (24x36mm). Here we can go up to 64 A4 pages per one frame to optimize material and process productivity.

It is possible to set negative or positive image. The integration of the device is provided over standard USB 2.0 interface.

Microbox ImageCOM writer can work with all standard 35mm microfilm types.

Robust device construction and user friendly management in daily work, combined with highest precision, will provide an efficient integration in existing archiving procedures with the best quality of microfilm image.

TECHICAL DATA :

Media	all common 35mm roll microfilm types 30,5 and 40 m
Resolution	12.000 dpi
Speed	approx 30 sec / frame – up to 128 A4 images/min
Precision	2,1 micrometer
Output	bitonal or greyscale
Integration	USB 2.0 index in OCR writing at beginning and end of the tape
